

Olist E-Commerce Sales Data Analysis

by

John khalil

Data analyst

Tools: Power BI -DAX - Data Modeling
– Power Quarey

Project Objective

This project aims to analyze e-commerce sales data from Olist to identify sales trends, customer behavior, shipping performance, and product category performance

Dataset Source:

Public dataset from Olist (Brazilian e-commerce platform)

Deliverables

Four interactive dashboards

Business insights for decision making

Visual storytelling for stakeholders

Shipping & Review Analysis

This dashboard analyzes order fulfillment and customer feedback. It highlights average delivery time, total and canceled orders, as well as review distribution and waiting time per city.

1. Top Performing Cities & Products

1. São Paulo recorded the highest total sales (~\$1.8M), followed by Rio de Janeiro.
2. Watches, shirts, and sports gear are the most profitable categories.

2. Customer Behavior Trends

1. 90%+ of customers are one-time buyers. Repeat customers represent a small fraction (~9.6K of 96K total).
2. Sales peak during weekdays, especially early in the week, with a noticeable drop on weekends.

3. Shipping Performance

1. The average delivery time is **23.86 days**, with some states (e.g., RR, AP) exceeding **45 days**, which may affect customer satisfaction.
2. Majority of reviews are positive (27K scored 5 stars), but 2.7K reviews are low (1–2 stars), indicating room for service improvement.

4. Payment Methods & Revenue Flow

1. Total payment value is well-distributed, with a visible preference for specific payment types.
2. Freight charges form a noticeable portion of the payment (~\$2.25M out of \$27M), which should be optimized.

Recommendations

OLIST

:Boost Customer Retention: Launch loyalty programs or retargeting campaigns to convert more one-time buyers into repeat customers. Improve Logistics in High-Delay States: Focus on reducing shipping times in regions like Roraima (RR), Amapá (AP), and Amazonas (AM) to enhance satisfaction and review scores. Optimize Weekend Sales: Launch promotions during weekends to balance sales performance across the week. Analyze Low Reviews: Dive into negative feedback to understand customer pain points and enhance post-purchase experience. Refine Freight Strategy: Consider flat-rate or free shipping thresholds to manage freight costs while maintaining competitiveness.

▣ *Slide Content: Launch a Customer Loyalty Program Encourage repeat purchases by rewarding frequent buyers. Negotiate with Shipping Partners Aim to reduce average delivery time across all regions. Target High-Sales Cities with Promotions Run localized marketing campaigns in top-performing cities. Analyze and Respond to Customer Reviews Address negative feedback to improve overall customer satisfaction. Optimize Shipping Costs Explore alternative shipping options to reduce total order costs.*

This project provided valuable insights into customer behavior, sales trends, and operational performance. By leveraging data visualization and KPIs, we identified opportunities for growth, improved efficiency, and enhanced customer satisfaction. Power BI proved to be a powerful tool for transforming raw data into actionable insights that can guide better decision-making.
